▲ Prostate Specific Ag ⁰¹	6.1 High	1.4 07/30/2025	ng/mL	0.0-4.0																		
Roche ECLIA methodology. According to the American Urological Association, Serum PSA should decrease and remain at undetectable levels after radical prostatectomy. The AUA defines biochemical recurrence as an initial PSA value 0.2 ng/mL or greater followed by a subsequent confirmatory PSA value 0.2 ng/mL or greater. Values obtained with different assay methods or kits cannot be used interchangeably. Results cannot be interpreted as absolute evidence of the presence or absence of malignant disease.

Roche ECLIA methodology.

The table below lists the probability of prostate cancer for men with non-suspicious DRE results and total PSA between 4 and 10 ng/mL, by patient age (Catalona et al, JAMA 1998, 279:1542).

Please note: Catalona et al did not make specific recommendations regarding the use of percent free PSA for any other population of men.																						
Reflex Criteria ⁰¹		The percent free PSA is performed on a reflex basis only when the total PSA is between 4.0 and 10.0 ng/mL.
